**Supplementary Figure 1. IOP after topical eye drops and intravitreal DPP microparticle injection.** (A) IOP was followed after administration of topical dorzolamide eye drops (squares, n = 6) or vehicle control (circles, n=6). (B) IOP was followed after intravitreal injection of DPP (squares, n=6) or control (circles, n=6) microparticles. There were no significant differences in mean, absolute IOP of control versus treated eyes. Error bars indicate ±SD.
